

ABSTRACT

An image capture device is provided, a portion of which is insertable into an expansion slot of a handheld PC or PDA device, which is configured like a camera familiar to the user. In one embodiment, the image capture device includes a lens unit
5 that is rotatable over about 180° degrees. The image capture device additionally includes an optical viewfinder rotatable with the lens unit. The image capture device advantageously includes an indicator visible from either side of the image capture device regardless of the lens position.
